

WEB EC ONE

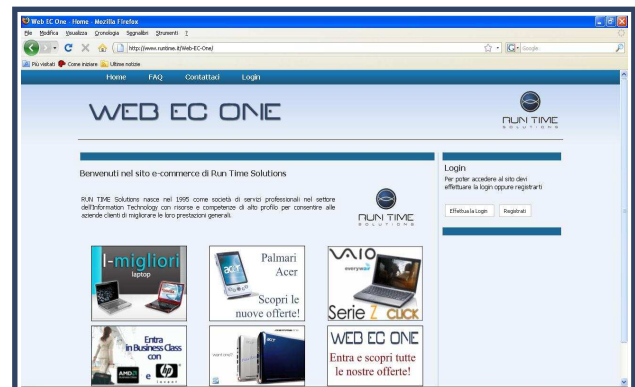

E-commerce solution for your business on SAP® Business One

WEB EC ONE is a fully integrated to SAP Business One solution which allows you to integrate E-commerce features in your web site.

It was conceived to manage business relations between actors in the supply chain (B2B) and to manage relationships with end customers (B2C). It allows you to manage catalogs, news, prices, conventions, discounts and promotions.

Through a simple web interface, your customers will be able to view your showroom with the main deals, to consult your products, to check the availability, to calculate a quote and to create a sales order directly. From SAP Business One directly, you will decide which items will be available in the online catalog, which customers will be enabled to purchase via web and which promotions will be activated. Thanks to the customer authentication, the system will apply the business conditions assigned to it in SAP Business One automatically.

Every customer may decide to save his cart or to create a sale order directly and, in every moment, will be enabled to display the state of his purchases. The orders processed through the WEB EC ONE module will be transferred automatically in SAP Business One ready to be shipped and invoiced.

WEB EC ONE: your online shop with SAP Business One

Developed in Java technology, based on high scalable platform and multi-site solutions support.

FEATURES

- ❖ Data security and confidentiality ensured by the *https* protocol.
- ❖ Management of items, product categories, news, deals and promotions.
- ❖ Fully integrated with SAP Business One, it allows you to have updated prices and discounts always linked to the customer who logs in. Thanks to this integration you will save a good amount of time because prices and price lists will be insert in the management software only, and thus avoiding data duplication and errors.
- ❖ Displaying the stock warehouse.
- ❖ Sending automatic messages via e-mail to the occurrence of certain events such as: registration to the site, account delete, order confirm, etc.
- ❖ Consulting the order history for each customer directly.
- ❖ Shipping costs management.
- ❖ Automatic recording of the sales orders in SAP Business One.
- ❖ Product rating by customers.
- ❖ Multilanguage support and internal search engine.
